

Feeney, Inc. Debuts CableRail Tensioning Tool

Easy-to-use tool creates consistent cable tension on CableRail railings

OAKLAND, Calif. – March 21, 2017 – [Feeney, Inc.](#), a leading manufacturer of high quality stainless steel and aluminum railing systems, has introduced the CableRail Tensioning Tool, a compact, durable and lightweight tool designed to simplify the installation of Feeney CableRail for builders, contractors and installers.

Achieving uniform cable tension is critical to proper CableRail installation and long term performance. The CableRail Tensioning Tool efficiently pulls cable through the CableRail Quick-Connect[®]SS Fitting end, reducing the need for additional tensioning at the Threaded Terminal end and leaving more thread for future adjustments. A built-in tension indicator ensures that tension is consistently applied to each set of cables, while a powerful 6X gear ratio allows for tensioning of longer cable lengths – optimizing the open look of CableRail and decreasing material costs.

“As homeowners continue to enhance their outdoor living spaces, the demand for easy-to-install building materials and innovative installation tools is growing,” said Andy Penny, vice president of marketing and advertising, Feeney, Inc. “Feeney’s new CableRail Tensioning Tool enables installers to tension CableRail with minimal effort while also ensuring consistent tension, saving them time and costs.”

Able to withstand the demands of the toughest jobsites, the CableRail Tensioning Tool can be used on 1/8-inch diameter stainless steel CableRail in a wide variety of post materials. An adapter for 3/16-inch and 1/4-inch cable is available as a separate accessory item.

The CableRail Tensioning Tool is available now through Feeney authorized dealers.

About Feeney
