LIGHTLINE® OVER-DOOR CANOPIES ADD STYLE AND EYE-CATCHING DESIGN TO ENTRANCES

Feeney introduces a durable and weather-tough, over-door canopy that offers a perfect design detail for many residential and commercial projects

OAKLAND, California, January 2009 – Feeney introduces the Lightline® canopy products, manufactured by Polymer Kunststoffe GmbH of Germany. These products have been widely used in Europe to shield people from the elements when they leave their homes or businesses. The over-door canopy concept is ideal for new designs on entry, patio and side doors, where little protection is offered and space is an issue. Think of this as an old concept made new with innovative materials: stainless steel support arms, integrated aluminum gutters, and UV resistant acrylic visor panels in clear or frosted finishes.

“Lightline® canopy products require no custom design or one-off fabrication,” said Andrew Penny, Vice President of marketing and advertising at Feeney. “Each canopy comes in an easy-to-assemble kit with all the hardware necessary to assemble and install; plus, a patented Click-Lock pane attachment feature makes installation a breeze without drilling holes through the acrylic visor panes. Simply insert the panes into the frame, lower the support arms, and snap the Click-Lock ends together. The bonus is that installation can fit most standard doorways.”

The eye-catching designs are available in a variety of styles and sizes. The Gable Canopy adds a transitional styling twist and looks best on a pitched roof configuration. The elegant Arch Canopy works well with both modern and traditional designs. The deceptively simple design of the Curve Canopy adds a sleek and stylish look to most any door. The experienced Feeney staff is ready to assist with product selection and technical support.

Feeney Inc, based in Oakland, California, is a leading manufacturer of high quality stainless steel and aluminum products, marketed under their Feeney Architectural Products line. They celebrated their 60th anniversary in 2008. For more information and technical support, please call the Customer Service Hotline at 800-888-2418.
