

Stainless Steel Care & Maintenance

The protective chromium oxide film on the surface of the stainless steel products, including cables, connectors, rods, and all parts and components thereof (collectively, the "Product") give it superior corrosion resistance. Properly maintained, the Product will maintain excellent luster, strength and durability. In most applications, the Product won't rust or stain even after many years of service, but it's NOT rust or stain proof. With proper care and maintenance, the Product can remain beautiful and functional for years to come, even when it is exposed to harsh environments or corrosive elements.

This information is intended as a guide in the proper care and maintenance of the Product.

- ❖ Clean Product when shaded and never in freezing temperatures or when metal temperatures are sufficiently cold enough to cause condensation. Cleaning hot, sun-heated surfaces should be avoided since possible chemical reactions will be highly accelerated and non-uniformity could occur.
- ❖ Use warm water and mild soap when cleaning. Avoid harsh solutions or abrasive cleaning materials, including but not limited to, alkaline or acidic cleaners or solutions containing trisodium phosphate, phosphoric acid, hydrochloric acid, hydrofluoric acid, fluorides or similar compounds.
- ❖ Avoid using power-cleaning tools.
- ❖ Avoid Product coming in contact with chloride salts, sulfides, steel, iron or other rusting metals to avoid discoloration, rust and/or corrosion.
- ❖ Periodically inspect the cable tension for safety; re-tension as necessary.
- ❖ Report any signs of discoloration, rust and/or corrosion to Feeney, Inc. at 800-888-2418 or please visit our website at www.feeneyinc.com.
