DESIGNRAIL® RAILING SYSTEMS OFFER INNOVATIVE DESIGN OPTIONS

- Feeney offers a complete line of environmentally friendly aluminum railing frame systems that combine durability, strength and good looks –

OAKLAND, California, January 2012 – Feeney, Inc., known for their CableRail line of architectural cable assemblies, has taken the frustration out of planning for a new railing by offering a pre-engineered, component-based aluminum railing system called DesignRail®. These railings can be easily cut and assembled on-site using components that snap and screw together—no welding, grinding, or special finishing. Plus, the rails and stanchions are made from high-strength, aluminum-alloy that contains a minimum of 70% reclaimed content and is also fully recyclable. These lightweight but hard-wearing materials are cost effective as well; they actually reduce shipping costs and are easier to handle on the job.

“The DesignRail® railing system is designed for the times,” said Del Leutbecher, Director of Business Development at Feeney, “because it offers busy designers, architects, and building professionals the convenience of multiple design options using engineered components that are low maintenance, durable, and environmentally friendly. In addition, this railing system is easy to install and versatile. It can be used for guardrails, gates, and fences in interior, exterior, residential, and commercial settings. Even the infill can be customized with options that include tempered glass panels, aluminum pickets, vertical cables, and horizontal cables”

The DesignRail® components are available in 8 standard colors and over 200 custom colors to suit the most innovative design requirements. The tough powder coated finishes adhere to rigorous AAMA-2604 coating specifications, offering superior color retention, impact resistance, and weather durability. Available with the system are ADA compliant applied grab rail designs,
5 different styles of cap rails, and 4 post-mounting options. This adds up to structural integrity as well as lasting beauty. The low maintenance benefits include no rusting, peeling, splintering, cracking, or repainting, issues that are typically associated with many other types of materials and railing systems. The product comes with a 10-year warranty, and the experienced Feeney staff is ready to assist with product selection and technical support.

Feeney Inc, based in Oakland, California, is a leading manufacturer of high quality stainless steel and aluminum products, marketed under their Feeney Architectural Products line. They celebrated their 64th anniversary in 2012. For more information and technical support, please call the Customer Service Hotline at 800-888-2418 or visit http://www.feeneyinc.com/.
