Feeney Inc. Launches New LED Rail Light Kits for DesignRail®

LED Light Kits Combine the Sleek Look of DesignRail® With the Brilliance of LED Lighting

OAKLAND, Calif. (January, 2014) – Leading railing and railing infill manufacturer, Feeney, Inc., is continuing its practice of developing attractive, cutting edge building products with the launch of new LED Rail Light Kits for their DesignRail® aluminum railing systems. Functional as both an outdoor lighting accent and a visual aid for low-light areas, the new LED Rail Light Kits are the latest addition to the company’s popular DesignRail® line.

The new LED Rail Light Kits are available in two sizes, a 21 inch length and a 32 inch length, providing fuller light distribution than systems using smaller lighting components. The Power Kits (required for installation) include either a 35 watt or a 60 watt, 24 volt driver. The optional inline LED Dimmer Kit includes a remote control and an easy to install dimmer to control the lighting level. Providing enhanced ambiance in the outdoor living environment and better lighting at stairs and railings, the new Feeney LED Rail Light Kits utilize the latest LED technology. Outdoor LED lamps offer longer lamp life and lower energy usage than traditional lighting sources. LED lamps contain no hazardous substances, making them eco-friendly for those builders, contractors and homeowners seeking to use sustainable products and practices.

“Feeney is very excited about launching the new LED Rail Light Kits for the builder, remodeler or homeowner looking for architectural products that blend high-style design with the latest technology,” said Andrew Penny, vice president, marketing and advertising. “Combining the sleek look of our DesignRail® aluminum railings with the brilliance of LED lighting creates a beautiful new way for our customers to light their outdoor spaces.”

The warm white LED light is designed to recess into the underside of the top and bottom rails of DesignRail® railing systems, while the snap-on frosted lens evenly diffuses light over outdoor porch and deck areas. Homeowners and remodelers will find the LED Rail Light Kits to be

easy to install in new and existing installations of DesignRail®.

The Feeney LED Rail Light Kits are fully weatherproof and include the LED light strip, connectors, the Feeney Light Lens Diffuser, grommets and terminator caps. The Feeney Power Kit is fully waterproof as well, containing a 35 watt or a 60 watt 24 volt driver, extension cables, a two-way splitter, wire nuts and connectors. Feeney plans to offer a broad range of components to accommodate projects requiring more customized solutions. The new Feeney LED Lighting Kits are expected to be available as early as April of 2014 by special order from retailers who currently offer Feeney, Inc. DesignRail® products.
