CableRail by Feeney Matches Any Architectural Style
The Stylistic Versatility of CableRail Enhances Home Designs from Cottage to Contemporary

OAKLAND, Calif. (December 1, 2013) – When custom designing or remodeling a home that has a distinct architectural style or character, finding products that add value yet harmonize with the existing design can pose a challenge. One unique and visually striking exterior enhancement can be found with innovative CableRail stainless steel cable assemblies by Feeney, Inc. CableRail cable assemblies offer exceptional design versatility to match a wide array of architectural styles on interior and exterior railing applications.

Meeting the rigorous design requirements of imaginative architects, builders, and homeowners, CableRail railing products complement any architectural design whether it’s a cottage, contemporary, traditional or period style home.

Architects and builders understand that instead of building a conventional ranch or two-story home, today's discriminating homeowner prefers to own a home with a well-defined architectural style. CableRail styling offers the sleek horizontal emphasis that home designers are seeking for a contemporary home design, and it suits more traditional applications as well. For the historical revival or old-style home, it runs unobtrusively between ornately designed wood posts matching the classic look of a traditional home.

The innovative Eugene, Oregon-based architectural firm, 2fORM Architecture, has repeatedly used Feeney products in a variety of residential and commercial projects over the years, including stair and balcony railing applications.

Commenting on the stylistic versatility of CableRail, architect Richard Shugar AIA, LEED AP said, “CableRail is designed in such a way as to not call attention to itself, allowing the forms, contours and details of the building to come forward.” Shugar said he prefers to use products like CableRail, confident they represent the latest in building design and technology.
The CableRail line of products includes a wide selection of stainless steel cable assemblies in both standard and custom designs. These assemblies may be fabricated at the Feeney factory and delivered ready to install or constructed on site. Made of durable, high-quality 316-grade stainless steel, CableRail cables and components are suited to any railing application. The low maintenance, environmentally friendly CableRail stainless steel cable assemblies are made with over 70 percent recycled content. The clean, finished look of the strong but slender 1/8 inch CableRail cables is enhanced by special end fittings that are easily concealed into wood or metal posts.

Stylistically versatile, the innovative CableRail design aesthetic complements and enhances homes designed in a myriad of architectural styles, including cottage, contemporary, traditional, transitional, prairie style or log cabin. For more information about the CableRail line of standard and custom fabricated stainless steel cable assemblies and other Feeney products, visit www.feeneyinc.com.
