Subject: **Sta-Lok® Recycled Content**

Feeney certifies that the stainless steel used in our Sta-Lok® rods contain the following percentages of recycled content:

Sta-Lok® Stainless Steel Rods

Percentage of pre-consumer* recycled content – 44%

Percentage of post-consumer** recycled content – 50%

** “Pre-consumer” materials are generated by manufacturers and processors and may consist of scrap, trimmings, and other by-products that were never used in the consumer market.*

*** “Post-consumer” material is an end product that has completed its life cycle as a consumer item and would otherwise have been disposed of as a solid waste. “Post consumer materials” indicates the product was made with these materials that were recycled by residents and other businesses.*

For LEED point certification on a specific project, we can also provide the recycled content percentage based on the total weight of the Sta-Lok® rods used. Please contact us at 1-510-893-9473 for more information.

Feeney’s Sta-Lok® stainless steel rods are characteristically durable with a long product life and very low maintenance. Additionally, at the end of their usage cycle, Sta-Lok® stainless steel rods can be fully recycled at metal reclamation sites.

Sincerely,

Andrew Toimil
